Data Platform Engineer at Northwind Rail

Northwind Rail runs the timetable that four regional operators publish from, and the platform team keeps the feeds behind it honest. You will own the ingestion path from operator uploads through to the published timetable.

WHAT WE ARE LOOKING FOR

- Five years building batch or streaming data pipelines in production.
- Fluency in Python and SQL, and comfort reading a schema you did not write.
- Experience carrying a pager for a pipeline you wrote.

HOW WE WORK

Reviews are written, releases are small, and the roadmap is public to the whole company. The team meets in person two days a week.
